Rhinos have walked the Earth for more than 50 million years. Today, all five species face extinction, some within our lifetime. By refusing to lose rhinos, we ensure the protection and survival of many other species that share their habitats, including people.

PLEASE JOIN US

IRF protects rhinos and their habitats in Africa and Asia. Our core values are hard work, passion, optimism, and partnership.

3 rhinos are killed in Africa EVERY DAY

Between the time you have breakfast and the time you wake up the next morning, at least three rhinos will have been poached in Africa. Rhino horn is illegally sold for traditional Asian medicine and other uses. In Vietnam, horn is used to 'treat' cancer, prevent hangovers*, and as a high value gift item. Thousands of rhinos have been senselessly killed for their horns in the past 10 years, especially in Africa.

*There is no scientific evidence that rhino horn has medicinal value.

PEOPLE ARE KEY

Providing education, jobs and economic incentives for local people is critical to successfully conserving rhinos and other species sharing their habitats.

WON'T YOU JOIN US?

Since 1991, the International Rhino Foundation has worked hard to ensure the survival of the five rhino species through conservation and research. At the heart of our vision is the belief that these magnificent species should endure for future generations.
